FOR IMMEDIATE RELEASE**TRiant REPORTS THIRD QUARTER 2001 FINANCIAL RESULTS**

NANAIMO, CANADA — NOVEMBER 1, 2001 — **Triant Technologies Inc.** (CDNX:TNT; OTCBB:TNTTF) reports unaudited financial results for the third quarter and nine months ended September 30, 2001 (expressed in Canadian dollars).

Revenue for the third quarter ended September 30, 2001 increased to \$840,739 compared to revenue of \$425,935 for the third quarter ended September 30, 2000. The Company's third quarter revenue was principally driven by *ModelWare*® – Triant's equipment health monitoring and advanced fault detection solution for the semiconductor industry. The net loss for the third quarter ended September 30, 2001 was \$1,975,726, or a loss per share of \$0.05, compared to a net loss of \$422,867, or a loss per share of \$0.01, for the third quarter ended September 30, 2000. The wider net loss reflects the Company's continued investment in aggressively increasing product development and marketing efforts in order to accelerate its product and market development plans, as well as the impact of the global economic slowdown.

Revenue for the nine months ended September 30, 2001 increased to \$3,520,807 compared to revenue of \$1,108,087 for the nine months ended September 30, 2000. The net loss for the first nine months of 2001 was \$2,685,125, or a loss per share of \$0.06, compared to a net loss of \$1,211,864, or a loss per share of \$0.05, for the first nine months of 2000. During the nine months ended September 30, 2001, the Company received \$2.0 million in new orders and entered the fourth quarter with a backlog of \$0.4 million.

Commenting on the quarterly results, Robert Heath, chairman and chief executive officer, stated: "We continue to make progress towards our corporate and operational goals, including more than doubling revenue for 2001 over 2000 and investing in product and market development. Our \$3.5 million in revenue and \$2.0 million in new orders are the result of our strategy to leverage our global distribution channels and strategic alliances.

"Our strategic focus is to secure the market leadership position with "best-of-breed" solutions for our customers in equipment health monitoring, advanced fault detection and sophisticated data analysis technology. This will assist us in further penetrating our existing customer base and developing new customer relationships in the semiconductor equipment arena and other vertical markets where we believe large opportunities exist.

"We plan to achieve this goal through a business model centered on our core technology and intellectual property, using a combination of product sales, original equipment manufacture (OEM) licensing, value-added consulting, and web-based delivery of data analysis and reporting services. We will continue to use our financial strength to execute on our strategic plan.

"Our outlook remains positive, supported by our accomplishments during the first three quarters of 2001, despite the downturn that the semiconductor industry is experiencing. Sales of an emerging technology typically fluctuate during the course of the year as a result of customer demand, implementation schedules and industry cycles, therefore, we continue to believe our full-year results should give the best indication of our tangible progress."

- m o r e -

Triant Technologies Inc. develops, markets, and supports equipment health monitoring, advanced fault detection and sophisticated data analysis technology. Triant provides innovative software solutions that help its customers improve the productivity of their manufacturing equipment and is focused on the application of its technology primarily to the semiconductor industry and secondarily to other industries. Triant's core technology is UPM (Universal Process Modeling), a proprietary advanced mathematical algorithm that can be used to model the behavior of any correlated system or process. To address the emerging market opportunity in the semiconductor industry, Triant has developed ModelWare[®]/RT, an equipment health monitoring and advanced fault detection software solution, based on its core UPM technology. More information about Triant is available via the Internet at www.triant.com.

This news release contains forward-looking statements that are subject to various risks and uncertainties. The Company's actual results could differ materially from those anticipated in such forward-looking statements as a result of numerous factors that may be beyond the Company's control. Forward-looking statements are based on the expectations and opinions of the Company's management on the date the statements are made, and the Company assumes no obligation to update forward-looking statements should circumstances in management's expectations or opinions change.

FOR IMMEDIATE RELEASE

TRiant RECEIVES TORONTO STOCK EXCHANGE CONDITIONAL LISTING APPROVAL

NANAIMO, CANADA — DECEMBER 13, 2001 — **Triant Technologies Inc.** (CDNX:TNT; OTCBB:TNTTF) announced today that the common shares of the Company have been conditionally approved for listing on the Toronto Stock Exchange (TSE), subject to fulfilling all of the prescribed requirements of the TSE on or before March 13, 2002. The stock symbol "TNT" has been reserved by the TSE for use for the Company upon listing on the TSE. The sponsorship for the listing of the Company on the TSE has been provided by Sprott Securities Inc.

Triant Technologies Inc. develops, markets, and supports equipment health monitoring, advanced fault detection and sophisticated data analysis technology. Triant provides innovative software solutions that help its customers improve the productivity of their manufacturing equipment and is focused on the application of its technology primarily to the semiconductor industry and secondarily to other industries. Triant's core technology is UPM (Universal Process Modeling), a proprietary advanced mathematical algorithm that can be used to model the behavior of any correlated system or process. To address the emerging market opportunity in the semiconductor industry, Triant has developed ModelWare®/RT, an equipment health monitoring and advanced fault detection software solution, based on its core UPM technology. More information about Triant is available via the Internet at www.triant.com.
